WEATHER OF CONCERN

Weather of Concern

- Rain clearing Friday night and Saturday morning could allow for morning valley fog, another driving hazard.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

Key Points

11/8 – 11/15

Thursday-Friday

- Light valley rain and moderate mountain precipitation will continue. Leaf-clogged drains could result in ponding of water on roadways and minor street flooding in neighborhoods.
- Snow levels will remain high, above most pass levels, but there could still be impacts to travel as roads will be wet and slippery.
- Winds will be strong and gusty at times, as high as 60 mph over highest elevations. Strong winds could down trees and powerlines with prolonged power outages.

Saturday

- Short break in weather system expected with no new impacts anticipated at this time.

Sunday-Tuesday

- Another round of valley rain and high elevation snow possible.
- This system is expected to be equal to the one currently starting to impact the State.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A wet unsettled weather pattern will continue through Friday. Most of the precipitation will be in the form of numerous mountain showers, with valleys seeing a mixture of occasional showers and breaks in the clouds, with more sunny breaks farther south. Snow levels will be near 5000 ft near the OR state line and 7000 ft near Lake Tahoe. Southerly gusts to 35-50 mph are possible at higher wind-prone locations, with 20-30 mph gusts common elsewhere.

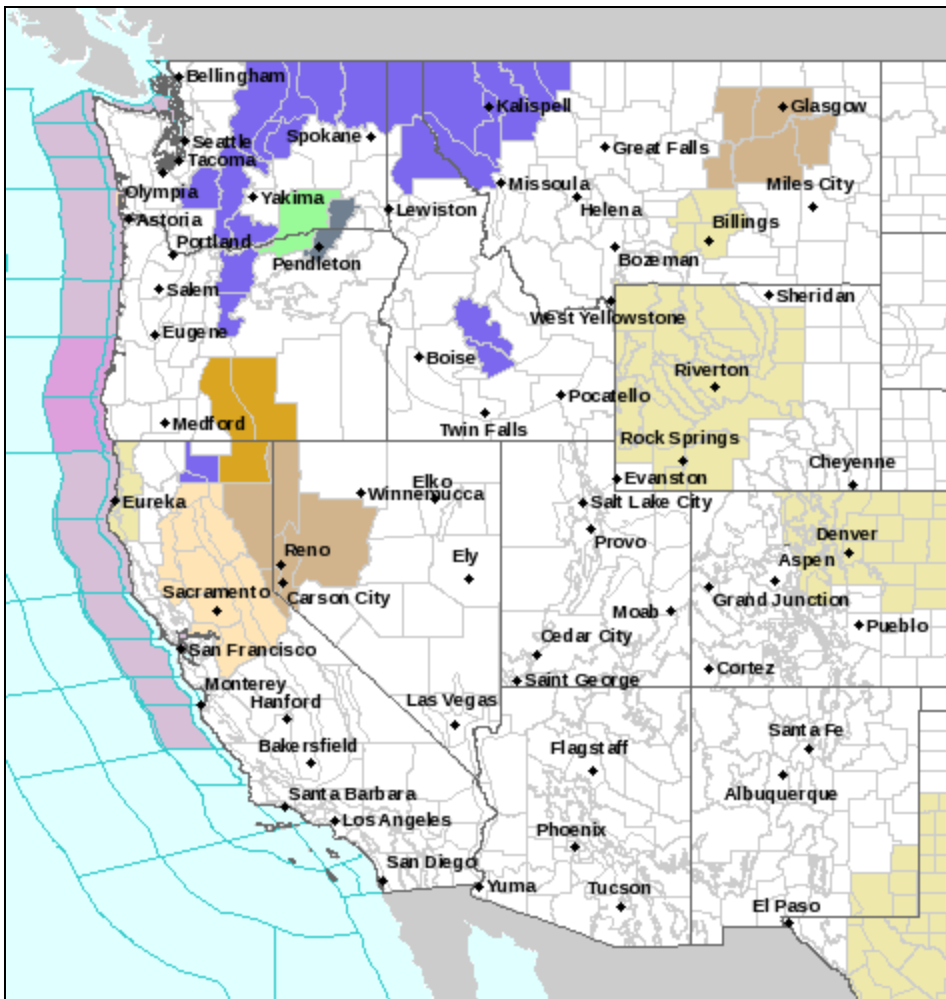

Saturday will be sunny and dry, but another Pacific storm will reach the north coast early Sunday and spread over the region through Monday. Snow levels could drop to 4000-6000 ft Monday as colder air moves in. After another break Tuesday a third system will bring rain and mountain snow next Wednesday and Thursday. Total rainfall equivalent through next Thursday could reach 3-5 inches or more in the mountains and 0.50-2.00 inches at lower elevations and east of the Cascade-Sierra crest, with the lightest amounts in the southern Sacramento Valley and in the Bay Area.

SOUTHERN CALIFORNIA

A weak disturbance in a zonal flow pattern will bring scattered showers to the northern half of Central California this morning, with some showers lingering over the Sierra through this afternoon. Most locations will receive less than a quarter inch of additional rainfall today. West winds of 20 to 30 mph with gusts to 50 mph will surface across the Tehachapi Mountains and Antelope Valley eastward through the Central Mojave Desert through Saturday morning and then again Sunday night through the middle of next week. Gusty north winds will occur across Santa Barbara County and the Grapevine both Monday night and Wednesday night. Zonal flow will cause temperatures to remain within a few degrees of normal through the middle of next week. Maximum temperatures will be in the 50s to low 60s across the mountains and mid 60s to mid 70s in the valleys.
